Branch: CSE

Semester: 3rd Year

Subject: Business Analytics / Data Analytics

Date: 31-05-2026

Objective

The objective of this project is to analyze business sales data to identify revenue trends, top-selling products, high-value categories, and regional performance. The analysis helps support business decision-making through data-driven insights and recommendations.

Dataset

The analysis was performed using the Sample Superstore dataset. The dataset contains information related to orders, sales, profit, discounts, products, categories, customers, and regions.

Key Performance Indicators (KPIs)

- Total Sales: 2.30 Million
- Total Profit: 286.40 Thousand
- Average Discount: 0.16

Dashboard Analysis

Revenue Trends

The Sales Trend chart shows how revenue changes over time. Sales fluctuate across different periods, indicating seasonal demand patterns and changing customer purchasing behavior.

Top-Selling Products

The Top 10 Products chart identifies the products generating the highest revenue. These products contribute significantly to overall business performance.

Category Performance

The Category Analysis chart shows that Technology is the highest revenue-generating category, followed by Furniture and Office Supplies.

Regional Performance

Regional analysis reveals differences in sales and profitability across regions. The West region contributes the highest sales, while other regions show varying levels of performance.

Key Insights

1. Total sales reached approximately 2.30 million.
2. Total profit generated was approximately 286.40 thousand.
3. Technology is the leading category in terms of revenue generation.
4. The top 10 products account for a significant portion of total sales.
5. Regional performance varies, indicating opportunities for targeted business strategies.
6. Sales trends show fluctuations over time, suggesting seasonal demand effects.

Recommendations

1. Increase inventory levels for top-performing products.
2. Focus marketing efforts on high-revenue product categories.
3. Improve sales strategies in lower-performing regions.
4. Optimize discount policies to maximize profitability.
5. Use historical sales trends for demand forecasting and inventory planning.

Conclusion

The dashboard provides valuable insights into sales performance, product contribution, category trends, and regional performance. The findings can help management make informed decisions to improve revenue growth and profitability.
